

Creating Energy Savings and Predictability for Public Entities

NJSEM combines the purchasing power of multiple public entities in New Jersey to procure and lock-in reduced rate energy pricing for up to 3-year increments, providing more predictable budgeted costs and aggregate savings to members.

More than 200 public entities are members of NJSEM, which works closely with members to set and achieve their energy pricing goals for electricity and natural gas.

NJSEM collaborates with experienced energy consultants and a team of experts, attorneys and administrators, to prepare and organize the bid packages and optimize pricing for energy procured from members located in public utility company territories in seven geographic regions across New Jersey.

SEM bids for electric power supply also include an Enhanced Renewable Energy Product which means that members receive a power supply that has nearly 30% renewable energy content and meets Sustainable Jersey (SJ) standards to qualify for 10 SJ certification points under the "Buy Electricity from a Renewable Source" action.

NJSEM is governed by an elected Executive Board of local Business Administrators and Officials who bid transparently for electricity and natural gas contracts in compliance with state and local laws, NJDCA/DLGS regulations and purchasing guidelines.

Established: 2009

Utility Companies

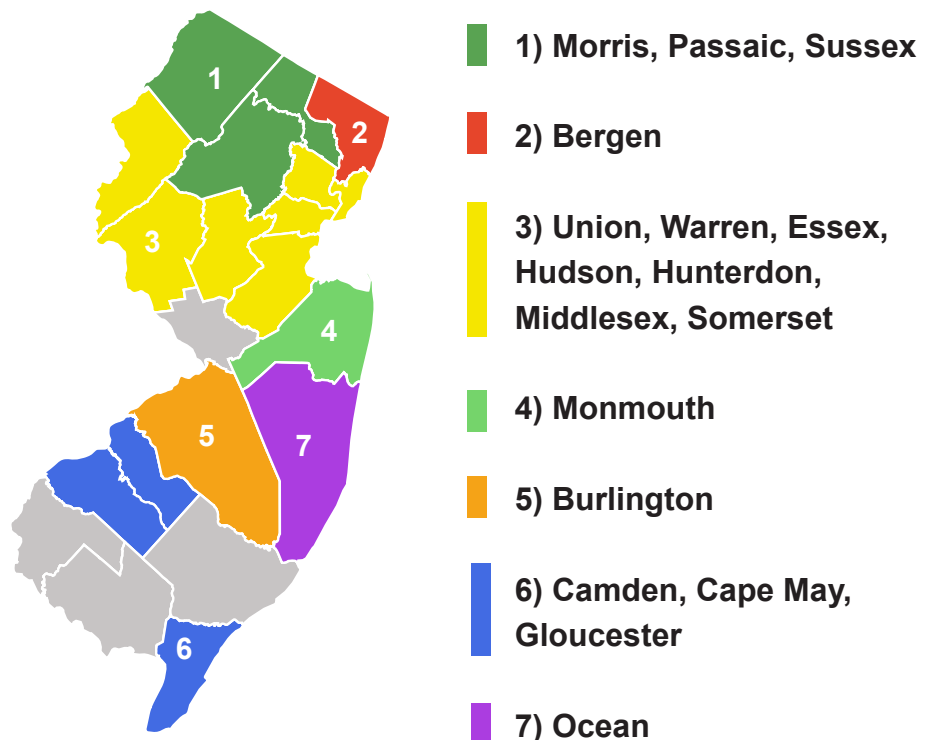

Atlantic City Electric
JCP&L
Rockland Electric
PSE&G
New Jersey Natural Gas
Elizabethtown Gas
South Jersey Gas
